ANNEXES

- Annex 1 Bird Species Summary
- Annex 2 Existing Ornithological Records
- Annex 3 Ornithology Field Survey Effort
- Annex 4 VP Flight Activity Survey: Target Species Flight Records

1 INTRODUCTION

- 1.1.1 This Technical Appendix has been prepared to accompany **Chapter 9** of the Environmental Impact Assessment (EIA) Report for ScottishPower Renewables' (SPR) Earraghail Renewable Energy Development (hereafter 'the proposed Development').
- 1.1.2 It presents detailed methodologies and results of ornithology desk studies and field surveys completed between 2019 and 2021 to inform the design and assessment of the proposed Development.
- 1.1.3 It should be read with reference to the following Figures, which are included within Volume 3 of the EIA Report:
 - **Figure 9.1**: Ornithological Statutory Designated Sites for Nature Conservation;
 - Figure 9.2: Existing Ornithological Records;
 - Figure 9.3a: Vantage Point Flight Activity Survey Plan (Year 1);
 - Figure 9.3b: Vantage Point Flight Activity Survey Plan (Year 2);
 - **Figure 9.4**: Breeding Bird Survey Plan;
 - Figure 9.5: Prey Transects Plan;
 - Figure 9.6a: Target Species Flight Activity Raptors and Owls (Year 1);
 - Figure 9.6b: Target Species Flight Activity Other Species (Year 1);
 - Figure 9.6c: Target Species Flight Activity Raptors and Owls (Year 2);
 - Figure 9.6d: Target Species Flight Activity Other Species (Year 2);
 - Figure 9.7: Moorland Breeding Bird Survey Results;
 - Confidential Figure 9.2.1: Existing Ornithological Records;
 - Confidential Figure 9.2.2: Breeding Annex1/Schedule 1 Raptor and Owl Observations;
 - Confidential Figure 9.2.3: Breeding Diver Search Results;
 - Confidential Figure 9.2.4: Breeding Diver Focal Loch Watch Results; and,
 - **Confidential Figure 9.2.5**: Breeding Black Grouse Survey Results.
- 1.1.4 Only common bird species names are referred to within the main text of this Appendix. **Annex 1** provides a summary of all bird species referred to herein, within **Chapter 9** of the EIA Report and all other associated appendices and figures. Both common and species names are provided, together with a summary of their conservation status as relevant.
- 1.1.5 Information pertaining to the locations of sensitive breeding bird species, which is considered confidential, is provided in Confidential Appendix 9.2 and associated figures (Confidential Figures 9.2.1 to 9.2.5). Such information will not be made publicly available but will be provided to the Scottish Government, NatureScot and the RSPB.

1.2 Site Overview

- 1.2.1 The Site, as shown by the application boundary in **Figures 9.1** to **9.7**, lies immediately south of Tarbert in the north of the Kintyre peninsula, in Argyll and Bute. The Site largely comprises commercial forestry plantation, interspersed with some areas of open hill ground, most notably around the summit of Doire Lèithe, and comprising a mixture of acid grassland, bog and heathland habitats. Existing forestry access tracks intersect the Site through much of its extent. The Site is intersected by a number of watercourses and supports several lochans; the larger of which include Loch na Machrach Bige and Loch na Machrach Moire.
- 1.2.2 The surrounding wider area includes similar commercial forestry plantations, and larger expanses of open moorland to the west.

1.3 Key Guidance

- 1.3.1 Ornithology survey methodologies and subsequent interpretation of results has made reference to the following key industry standard guidance:
 - Brown, A.F. & Shepherd, K.B. (1993). *A method for censusing upland breeding waders*. Bird Study 40, 189-195.
 - SNH (2017). *Recommended bird survey methods to inform impact assessment of onshore wind farms.* Version 2. March 2017.
 - Hardey, J., Crick, H., Wernham, C., Riley, H., Etheridge, B. & Thompson, D. (2013). *Raptors: a field guide to survey and monitoring.* Third Edition. The Stationary Office, Edinburgh.
 - Gilbert, G., Gibbons, D.W. & Evans, J. (1998). *Bird monitoring methods*. A manual of techniques for key UK species. RSPB, Sandy, Bedfordshire.
 - Stanbury, A., Eaton, M., Aebischer, N., Balmer, D., Brown, A., Douse, A., Lindley, P., McCulloch, N., Noble, D. & Win, I. (2021). The Status of our bird populations: the fifth *Birds of conservation concern in the United Kingdom, Channel Islands and Isle of Man and second IUCN List assessment of extinction risk for Great Britain*. British Birds, 114, pp. 723-747.
 - SNH (2000). Windfarms and Birds Calculating a theoretical collision risk assuming no avoiding action. SNH Guidance Note. Available at www.nature.scot/sites/default/files/2017-09/Guidance%20Note%20-%20Windfarms%20and%20birds%20-
 - SNH (2018). Assessing significance of impacts from onshore wind farm outwith designated areas. Guidance. Version 2 February 2018.
 - SNH (2016). Assessing connectivity with Special Protection Areas (SPAs). Guidance. Version 3 June 2016.

1.4 Target Species

1.4.1 Target species for survey were identified through desk study and consultation with NatureScot, on the basis of their known or likely presence, their likely sensitivity to the proposed Development and those which are afforded a higher level of legislative protection, which is in accordance with current NatureScot guidance (SNH, 2017 and 2018). Primarily, target species included those species listed on/as:

- Annex 1 of the EC Birds Directive (2009/147/EC);
- Schedule 1 of the Wildlife and Countryside Act 1981 (as amended); and,
- Red-listed Birds of Conservation Concern (Stanbury et al. 2021).
- 1.4.2 This has ensured inclusion of qualifying interests of designated sites for nature conservation (Table 3.1) and "Priority bird species for assessment when considering the development of onshore wind farms in Scotland" as per NatureScot guidance (SNH, 2018).

2 METHODOLOGY

2.1 Desk Study

- 2.1.1 In accordance with NatureScot guidance (SNH, 2017), a desk study was undertaken to ascertain a coarse overview of likely bird populations and designated sites in proximity to the proposed Development, in order to identify target species for survey and recording.
- 2.1.2 The desk study was also continued over the course of field surveys to provide updated context on field observations and ensure the scope of surveys remained appropriate to inform the design and assessment of the proposed Development.
- 2.1.3 The desk study has included a review of the following key sources summarised in **Table 2.1**.
- 2.1.4 Available EIA documentation (based on surveys carried out January 2014 to August 2019) for the Sheirdrim Renewable Energy Development (Planning Ref. 19/02424/S36) has been reviewed together with additional peer reviewed literature and industry guidance, referred to where relevant.

| Key Source | Information Sought | Study Area |
|--|---|--|
| SNH Sitelink ¹ | Proximity to statutory designated sites for nature conservation with qualifying ornithological interests. | Within 10 km of the Site boundary, extended to 20 km for internationally designated sites with migratory geese qualifying interests. |
| Argyll Biological Records Centre (ABReC) – via the Highland Biological Recording Group (HBRG) | Existing ornithological records and Non-statutory designated sites. | Within 2 km of the Site boundary. |
| Royal Society for the Protection of Birds (RSPB) | Existing ornithological records. | Within 2 km of the Site boundary for all species, extended to 6 km for eagle species. |
| Argyll Raptor Study Group (ARSG) | Existing records of breeding and roosting raptors and owls. | Within 2 km of the Site boundary for all species, extended to 6 km for eagle species. |
| Forestry and Land Scotland (FLS) | Existing ornithological records. | Within the Skipness and Corranbuie FLS landholdings. |

Earraghail Renewable Energy Development Appendix 9.1: Ornithology

2.2 Field Surveys

- 2.2.1 Detailed knowledge of bird populations, distributions and flight activity has been derived from field surveys undertaken between 2019 and 2021, in order to predict the potential effects of the proposed Development upon ornithological features.
- 2.2.2 The identification of target species and scope of surveys undertaken was informed through consultation with NatureScot, proximity to designated sites and existing knowledge of sensitive species as derived from desk study (all consultation is summarised in **Chapter 9** in Volume 2 the EIA Report).
- 2.2.3 Field surveyor knowledge and experience of bird habitat associations has also informed and guided survey effort over the course of surveys.
- 2.2.4 It is common for proposed Development areas to change shape and size over the course of its evolution. Field surveys were accordingly adapted to account for any alteration in proposed Development areas. As such, the field surveys undertaken for the proposed Development comprise coverage of study areas required in accordance with NatureScot guidance (SNH, 2017) and the surrounding wider area.

Field Survey Personnel

2.2.5 All field surveys have been completed by experienced and professional ornithologists named in **Annex 3**; all of whom are all fully conversant in recognised bird survey methodologies for proposed wind turbine developments. Surveys between September 2019 and March 2020 were carried out by Gavia Environmental Ltd., with surveys from April 2020 carried out by Avian Ecology Ltd.

Methodologies

- 2.2.6 The following field surveys were completed between 2019 and 2021:
 - Vantage Point (VP) flight activity surveys;
 - Moorland breeding bird surveys;
 - Annex 1/ Schedule 1 Breeding raptor and owl searches;
 - Breeding diver searches;
 - Breeding diver focal loch watches;
 - Breeding black grouse surveys; and,
 - Prey transects.
- 2.2.7 Surveys were undertaken in accordance with recommendations outlined within NatureScot guidance (SNH, 2017). Any deviations from guidance are detailed in **Sections 2.2.58** to **2.2.64**, with justification where appropriate, or limitations acknowledged.

VP Flight Activity Surveys

2.2.8 VP flight activity surveys were undertaken in September 2019 to November 2021 and provide coverage of two full breeding seasons, and two full non-breeding seasons.

VP Locations and Viewsheds

- 2.2.9 During Year 1 surveys six VP locations were utilised, as shown in **Figure 9.3a** and detailed within **Table 2.2**. During Year 2 surveys, four VP locations were used as shown in **Figure 9.3b** and detailed within **Table 2.3**.
- 2.2.10 VP locations and areas of visibility, used in Year 2, have provided comprehensive visual coverage of the VP study area required for the proposed Development in accordance with current NatureScot guidance (SNH, 2017); defined as a 500 m buffer around outermost proposed turbine locations. The change in VP locations between Year 1 and Year 2 was a reflection of the evolving turbine layout and through consultation with NatureScot regarding appropriate VP viewshed coverage (with reservations concerning coverage in Year 1 raised)². VP 2 was used in both Year 1 and Year 2, but in Year 2 VPs 1 and 4-6 were dropped, and VPs 7 and 11 were added. For VP 3 although the same location was used in Year 1 and 2, the orientation of the viewshed was different, and the VPs are respectively called VP3a and VP3b (note for September-November 2020 in Year 2 VP 3a was used, with VP 3b used from December 2020 onwards).
- 2.2.11 For the purpose of the assessment Year 1 VP surveys are defined as the period September 2019 to November 2020, with Year 2 VP surveys the period December 2020 to November 2021. Given the shortcomings with the VP viewshed coverage in Year 1, only Year 2 VP data is used for collision risk modelling.
- 2.2.12 Modelled areas of visibility within the 2 km viewsheds from each VP location are illustrated in Figures 9.3a and 9.3b, respectively for Year 1 and Year 2 surveys.

| VP | Grid Reference | Viewshed Orientation |
|----|----------------|----------------------|
| 1 | NR 87530 65352 | North-north-west. |
| 2 | NR 87592 65315 | South-south-east. |
| 3a | NR 90045 61699 | South-south-east. |
| 4 | NR 89149 63511 | South-west. |
| 5 | NR 89384 63597 | South-east. |
| 6 | NR 87173 62554 | East. |

Table 2.2: VP locations during Year 1 surveys.

Table 2.3: VP locations during Year 2 surveys.

| VP | Grid Reference | Viewshed Orientation |
|----|----------------|----------------------|
| 2 | NR 87592 65315 | South-south-east. |
| 3b | NR 90045 61699 | South-west. |
| 7 | NR 89175 61367 | North-east. |
| 11 | NR 87863 63288 | South. |

² Consultation with NatureScot comprised scoping opinion on 2nd July 2020, and additional post scoping correspondence on 5th October 2020 and 29th January 2021, with all consultation by letter sent by email, with further details provided in **Chapter 9**.

Survey Effort

- 2.2.13 The total survey effort (hours) completed at each VP location in Year 1 between September 2019 and November (2020), and December 2020 to November 2021 (Year 2) is summarised in **Table 2.4**. Each VP survey session was up to three-hours in duration³.
- 2.2.14 Full details of all survey times, field surveyors used and weather conditions are presented in **Annex 3**.
- 2.2.15 In Year 1, VPs were carried out from six VPs (VP1-6) with a minimum of 72 hours per VP location typically completed (with fewer than 72 hours undertaken at only VP1 and VP6).
- 2.2.16 Survey effort in each year has typically exceeded the minimum of 72 hours per VP location divided between breeding (March to August inclusive) and non-breeding (September to February inclusive) seasons i.e. 36 hours breeding and 36 hours non-breeding, as per current NatureScot guidance (SNH, 2017). Note, the definition of 'breeding season' and 'non-breeding season' differs depending on the species present, with for example eagles having an extended breeding season starting in February (as per SNH, 2017) whereas other species commence breeding later.
- 2.2.17 Survey times were distributed throughout the day and were also completed in a range of weather conditions, but always conducive to survey and safe access.
- 2.2.18 In accordance with NatureScot guidance (SNH, 2017), flight lines were mapped for all target species passing through the VP viewshed. Details of species, number of birds, flight height in bands (at, below or above collision risk height), duration and direction were noted on standardised recording forms and field plans.
- 2.2.19 VP flight activity surveys commenced after a short period of "settling in", to ensure any potential disturbance to target species present within each viewshed had reasonably passed and surveyors were alert to survey following a traverse to each VP location.
- 2.2.20 Surveyors were stationary until the completion of watches at the VP locations and (when the VP surveys were carried out simultaneously) were in contact to ensure flight lines of target species where they were recorded, were not duplicated.

| VP | | 2019 2020 | | | | | Year 1 | | | | | | | | | |

 Table 2.4: VP flight activity survey effort summary.

³ One exception was a VP survey on 21/10/2019 which lasted 3.5hrs.

| 7 | 6 | 6 | 12 | 6 | 12 | 9 | 9 | 6 | 6 | 6 | 9 | 6 | 93 |
|----|---|---|----|----|----|----|---|---|---|---|---|---|----|
| 11 | 6 | 6 | 6 | 12 | 12 | 12 | 6 | 6 | 6 | 6 | 9 | 6 | 93 |

Target Species

- 2.2.21 Target species for recording included all Annex 1/Schedule 1 raptors, waders, divers, black grouse, owls, swans, geese and ducks (excluding mallard and feral waterfowl species) as observed during VP watches.
- 2.2.22 Target species included greylag goose. Greylag geese in Scotland comprise three populations:
 - the Icelandic migratory population present between October and April, predominantly in Scotland and northern England;
 - the north-west Scotland remnant population, which predominantly occur within western Scotland and in mainland northern Scotland; and
 - the re-established (naturalised) introduced population, which is widespread throughout Britain and Ireland (Mitchell & Hearn, 2004).
- 2.2.23 The local passage and non-breeding populations between October and April are considered to potentially comprise part of the Icelandic migratory population.

Secondary Species

- 2.2.24 Secondary species were also noted in approximately fifteen minute summary intervals, with the number of birds present and general behaviour recorded in order to build an overall picture of activity. Fifteen minute periods were considered appropriate to ensure surveyors were fully alert to target species activity, which took priority during survey.
- 2.2.25 Secondary species are defined here as commoner raptors (e.g. buzzard, kestrel and sparrowhawk), all gulls, feral species and mallard, along with any large concentrations of Schedule 1 or Red-listed passerines as recorded during survey.

Collision Risk Mortality

- 2.2.26 For species for which there is sufficient (considered ≥3 flights) "at collision risk" flight activity data, collision risk mortality as a result of birds colliding with rotor blades will be assessed using the Collision Risk Models (CRMs) as detailed in Band *et al.* (2007).
- 2.2.27 CRM was accordingly undertaken for golden eagle and hen harrier in Year 2. Given the reservations regarding VP viewshed coverage in Year 1 (see **Field Survey Limitations** section), no CRM was undertaken on Year 1 survey data.

Moorland Breeding Bird Surveys

- 2.2.28 Moorland breeding bird surveys (MBBS) to inform the design and assessment of the proposed Development have been undertaken in 2020. MBBS was not undertaken in 2021 given the MBBS assemblage recorded in 2020 was very limited (see **Section 3.2**).
- 2.2.29 The study area has comprised coverage of the Site, extended to include accessible areas of open habitats within 500 m as shown in **Figure 9.4** and in accordance with current NatureScot guidance (SNH, 2017). Much of the Site is forested, and therefore unsuitable for open country species.
- 2.2.30 The methodology employed has followed the adapted Brown and Shepherd (1993) method for censusing upland breeding waders, based upon the recommendations set out in Calladine *et al.*

(2009) as recommended in NatureScot guidance applicable at the time of survey (SNH, 2017). The methodology is suitable for moorland and open country species including, waders, skuas, gulls and some wildfowl species however, incidental observations of any raptors, owls or notable passerines (i.e. Schedule 1 and BoCC red-listed) were also recorded.

- 2.2.31 A series of four staggered visits were completed during each survey year, between April and July.
- 2.2.32 During each survey visit a pre-determined route was walked through the study area, with all birds seen or heard, and their behaviours (e.g. displaying, carrying food etc.) mapped in the field, using standard British Trust for Ornithology notation.
- 2.2.33 All surveys were undertaken during daylight hours and in fine conditions conducive to survey. Survey effort is summarised in **Table 2.5**. Full details of all survey times, field surveyors used and weather conditions are presented in **Annex 3**.

| Year | Visit | Date | Start Time (24hrs) | End Time (24hrs) | | | | | | | | |
|------|-------|------------|--------------------|------------------|--|--|--|--|--|--|--|--|
| 2020 | 1 | 30/04/2020 | 09:00 | 12:00 | | | | | | | | |
| | 2 | 21/05/2020 | 09:30 | 15:30 | | | | | | | | |
| | 3 | 16/06/2020 | 08:30 | 14:30 | | | | | | | | |
| | 4 | 08/07/2020 | 08:30 | 14:30 | | | | | | | | |

Table 2.5: Moorland breeding bird survey effort.

Annex 1/ Schedule 1 Breeding Raptor and Owl Searches

- 2.2.34 Breeding raptor and owl searches to inform the design and assessment of the proposed scheme were undertaken in 2020 and 2021 with reference to species-specific methodologies outlined in Hardey *et al.* (2013), as per NatureScot guidance (SNH, 2017).
- 2.2.35 Search visits were staggered across the core breeding season. Given the extent of the study area and terrain, searches were sometimes completed by a team of surveyors.
- 2.2.36 Survey effort is summarised in **Table 2.6**. Full details of all survey times, field surveyors used and weather conditions are presented in **Annex 3**.
- 2.2.37 The breeding raptor and owl study area has comprised coverage of the Site and areas out to at least 2 km for all raptor species, extended out to 6 km for breeding eagle species as shown in **Figure 9.4** and in accordance with current NatureScot guidance (SNH, 2017).
- 2.2.38 Search effort and areas have been informed through desk study records obtained from RSPB and the ARSG and through consultation with NatureScot.

| Year | Visit | Date | Start Time (24hrs) | End Time (24hrs) |
|------|-------|------------|--------------------|------------------|
| 2020 | 1 | 27/04/2020 | 09:30 | 18:30 |
| | 2 | 05/05/2020 | 10:00 | 16:00 |
| | 3 | 14/05/2020 | 08:00 | 14:00 |
| | 4 | 10/06/2020 | 10:40 | 16:40 |
| | 5 | 16/06/2020 | 07:00 | 17:00 |
| | 6 | 23/07/2020 | 16:00 | 19:00 |
| 2021 | 1 | 17/03/2021 | 08:30 | 11:30 |

| 8 | 30/06/2021 | 10:00 | 17:15 |
| 9 | 22/07/2021 | 10:50 | 17:20 |

Breeding Diver Searches

- 2.2.39 Searches for breeding divers were undertaken between May and July 2020, and April and July 2021, at all suitable waterbodies within and out to a 1 km buffer of the Site (as shown in **Figure 9.4**), following species-specific survey methodologies detailed in Gilbert *et al.* (1998) as per NatureScot guidance (SNH, 2017).
- 2.2.40 Searches sought to establish breeding occupancy by red-throated and black-throated diver and to determine breeding outcomes where possible.
- 2.2.41 Survey effort is summarised in **Table 2.7**. Detailed survey effort including survey conditions are presented in **Annex 3**.

| Year | Visit | Date | Start Time (24hrs) | End Time (24hrs) |
|------|-------|------------|--------------------|------------------|
| 2020 | 1 | 01/05/2020 | 05:00 | 08:00 |
| | 2 | 05/05/2020 | 11:00 | 14:00 |
| | 3 | 16/06/2020 | 08:30 | 14:30 |
| | 4 | 17/06/2020 | 12:00 | 18:00 |
| | 5 | 23/07/2020 | 12:30 | 15:30 |
| 2021 | 1 | 28/04/2021 | 10:15 | 13:15 |
| | 2 | 25/05/2021 | 14:30 | 17:30 |
| | 3 | 30/06/2021 | 18:00 | 20:15 |
| | 4 | 21/07/2021 | 08:00 | 11:00 |

Table 2.7: Breeding diver search summary.

Breeding Diver Focal Loch Watches

- 2.2.42 Where breeding occupancy was confirmed, focal watches overlooking occupied breeding lochans were undertaken to record incoming and outgoing flights of provisioning adult divers during the incubation and chick-rearing periods (July to August) in accordance with NatureScot guidance (SNH, 2017).
- 2.2.43 Watches were conducted from VP2 and VP4 used for VP Flight Activity Surveys (see **Confidential Figure 9.2.4**), given the limitations of establishing safe and discreet VPs within closer proximity to the occupied breeding lochans, and access restrictions outside the Site boundary.

- 2.2.44 Survey effort aimed to record a total of 20-30 incoming and outgoing flights, or sufficient activity to identify any regular flight patterns occurring over the Site, between occupied breeding lochans and foraging areas.
- 2.2.45 A total of 24 hours of targeted observation, were conducted from VP2 and VP4 in 2020, with 15 hours conducted from VP2 in 2021, as summarised in **Table 2.8**. This prioritised survey effort during the hours of dusk and dawn, when adult birds are likely to be most active. Detailed survey effort is presented in **Annex 3** and is in addition to VP flight activity survey effort.

| VP | 2020 | | Year 1 | 2021 | 2021 | |
|----|------|-----|--------|------|------|-------|
| | Jul | Aug | Total | Jul | Aug | Total |
| 2 | 6 | 6 | 12 | 3 | 12 | 15 |
| 4 | 6 | 6 | 12 | - | - | - |

 Table 2.8: Breeding diver focal loch watch effort (hours) – Year 1 and Year 2.

Breeding Black Grouse Surveys

- 2.2.46 Searches for black grouse leks to inform the design and assessment of the proposed Development were undertaken in 2020 and 2021, with reference to species-specific methodologies outlined in Gilbert *et al.* (1998), as per NatureScot guidance (SNH, 2017).
- 2.2.47 In each survey year, two search visits, following a number of preparatory visits, were undertaken between the last week in March and mid-May to record peak numbers of lekking males within the study area.
- 2.2.48 During searches all areas of suitable habitat (e.g. open moorland, woodland edges and tracks) within the study area were visited at dawn. All black grouse observed were recorded, with leks more than 200 m apart treated as separate leks.
- 2.2.49 Survey effort is summarised in **Table 2.9**. Full details of all survey times, field surveyors used and weather conditions are presented in **Annex 3**.
- 2.2.50 The breeding black grouse search area has comprised the Site and accessible areas out to 1.5 km as shown in **Figure 9.4** and in accordance with NatureScot guidance (SNH, 2017).
- 2.2.51 Given the extent of the study area and timing, searches were generally undertaken by small teams of surveyors to ensure safety.

| Year | Visit | Date | Start Time (24hrs) | End Time (24hrs) |
|------|-------|------------|--------------------|------------------|
| 2020 | 1 | 01/05/2020 | 05:00 | 08:15 |
| | 2 | 08/05/2020 | 05:00 | 08:30 |
| 2021 | 1 | 07/04/2021 | 05:40 | 08:40 |
| | 2 | 15/05/2021 | 04:15 | 07:15 |

Table 2.9: Breeding black grouse search effort summary.

Prey Transects

- 2.2.52 Prey transects to provide baseline information on the range and levels of prey items for golden eagle (and additional Annex 1/Schedule 1 breeding raptors and owls) were carried out to inform the appropriateness of habitat management proposals as part of mitigation and/or enhancement measures for the proposed Development.
- 2.2.53 Surveys were carried out in spring (March 2021) and summer (June 2021), to establish the presence of potential prey items for key species including small mammals (e.g. voles, rabbits and hares), large mammals (e.g. deer and livestock) reptiles, amphibians and birds. Evidence of prey included direct observation, and indirect evidence such as droppings, prints or rodent runs.
- 2.2.54 In order to survey representative habitats within (and adjoining) the Site, four 1 km transects selected using aerial maps, were walked with prey species evidence recorded in 20 x 50 m intervals, with the transects shown in **Figure 9.5**.
- 2.2.55 Survey effort is summarised in **Table 2.10**. Full details of all survey times, field surveyors used and weather conditions are presented in **Annex 3**.

| Transect No. | Date | Start Time (24hrs) | End Time (24hrs) | | |
|--------------|------------|--------------------|------------------|--|--|
| 1 | 04/03/2021 | 10:20 | 11:30 | | |
| | 08/06/2021 | 14:55 | 15:55 | | |
| | 29/08/2021 | 10:30 | 11:30 | | |
| 2 | 04/03/2021 | 12:00 | 13:00 | | |
| | 08/06/2021 | 13:25 | 14:30 | | |
| | 29/08/2021 | 11:45 | 12:45 | | |
| 3 | 04/03/2021 | 10:20 | 11:35 | | |
| | 08/06/2021 | 12:00 | 13:10 | | |
| | 29/08/2021 | 13:10 | 14:10 | | |
| 4 | 04/03/2021 | 12:40 | 13:50 | | |
| | 08/06/2021 | 10:20 | 11:40 | | |
| | 29/08/2021 | 14:40 | 15:40 | | |

Table 2.10: Prey transects survey summary.

Additional Surveys

- 2.2.56 The Site is not located in area of known importance for foraging migratory greylag or pink-footed geese (e.g. as per Mitchell, 2012), and is outwith any known important foraging sites on Kintyre for Greenland white-fronted geese. The broad habitats within the Site are also considered to be unsuitable for wintering and migrant foraging waterfowl. Feeding distribution surveys for geese and swans have therefore not been undertaken. Year 1 and 2 VP flight activity surveys did also not record overflying Greenland white-fronted geese or large frequent movements of other migratory waterfowl.
- 2.2.57 Surveys of woodland passerines, particularly in sites supporting commercial plantation woodland are not required in accordance with NatureScot guidance (SNH, 2017) and have not been undertaken. Observations of any notable species (incl. Schedule 1 species) were however noted during the MBBS and/or other ornithological surveys where observed.

Field Survey Limitations

- 2.2.58 The original site boundary considered during the Year 1 and Year 2 ornithology surveys was more extensive than the current application boundary, with the southern boundary extending out by approximately 1 km to include a larger area of commercial conifer plantation on-site. The original site boundary in the north of the Site extended out to a maximum of approximately 2 km to the west along the access route (although it did not extend as far as the western extreme of the access route), and the eastern extreme of the Site included Tarbert Wood Special Area of Conservation (SAC) and Tarbert to Skipness Coast Site of Special Scientific Interest (SSSI). The Site was reduced to the application boundary as shown in **Figures 9.1** to **9.7**, in June 2021, but the original site boundary is also shown as the shaded area for information on **Figure 9.4**.
- 2.2.59 All habitats within the original site boundary were accessible, with the exception of an exclusion zone in the eastern extreme of the Site⁴. The wider study areas used for the MBBS (500 m), Annex 1/ Schedule 1 Breeding Raptor and Owl Searches (2 km and 6 km), Breeding Diver Searches (1 km) and Breeding Black Grouse Searches (1.5 km) were surveyed from suitable locations within the original site boundary or public rights of way (PRoWs), scanning the study areas with the use of optics (telescope and binoculars). The study areas in Year 1 and Year 2 were consistent and these were based on the more extensive original site boundary (plus survey buffer). For the purposes of this assessment and interpretation bird records are presented and regarded in relation to the reduced, updated application boundary as shown in **Figures 9.1** to **9.7**.
- 2.2.60 MBBS were carried out 2020, but were not replicated in 2021 given it was determined that scheme design (turbines and infrastructure) would be predominantly concentrated in forestry and thus open habitats would be typically unaffected by the proposed Development.
- 2.2.61 Given the good visibility across the study area from the PRoWs this is not considered a limitation to the results obtained.
- 2.2.62 Plantation woodland habitats within the study area were surveyed by traversing tracks and clearings rather than walking directly through dense plantation habitat, due to logistical and health and safety considerations. The study area was appropriately covered from the accessible tracks and clearings and this is not therefore considered a limitation to the results obtained.
- 2.2.63 The VP viewshed coverage (in Year 2) covered all, except one turbine location, and much of the 500 m buffer around the outermost turbines. Slight gaps in VP viewshed coverage are often unavoidable particularly at sites with undulating topography and/or those with a high degree of forest cover. Consultation with NatureScot (see **Chapter 9** for further details) determined shortcomings with the VP viewshed coverage in Year 1. As such, the Year 1 VP survey data is considered as baseline information and to provide context, but it is not used to carry out CRM analysis.
- 2.2.64 Adverse weather conditions in February 2020 and subsequent restrictions in March and April 2020 due to the Covid-19 pandemic lockdown meant in March and April 2020 the number of hours of survey at some of the VPs was reduced. However, all efforts were made to address any deficit in VP hours in subsequent months (May 2020).
- 2.2.65 The Golden Eagle Topographical (GET) Model (see **Appendix 9.4**), is based on a previous turbine layout within the Site (which extended to 14-turbines). Given the results of the GET model are therefore based on a greater Proposed Development area, the results are considered 'worst-case scenario' and precautionary, although in the context of the scale at which GET modelling assesses effects on golden eagle, the reduced extent of the Proposed Development and any resulting

⁴ See Confidential **Appendix 9.2.**

reduction of effects on eagles, than those reported in the GET model, are considered inconsequential.

2.2.66 Substantial data is available and is considered acceptable to inform a planning decision.

3 RESULTS

3.1 Desk Study

Statutory Designated Sites for Nature Conservation

- 3.1.1 This section should be read with reference to **Figure 9.1**.
- 3.1.2 A review of NatureScot's Sitelink identifies that the Site does not form part of any statutory designated site for nature conservation with ornithological qualifying interests.
- 3.1.3 **Table 3.1** summarises statutory designated sites with ornithological features of interest located within 10 km of the application boundary, extended to 20 km for internationally designated sites with migratory goose interests.
- 3.1.4 Distances specified within **Table 3.1** are taken from the application boundary to the designation boundary at its nearest point.

| Designated Site | Distance and Direction from Site | Ornithological Qualifying Interests |
|-----------------------------|-------------------------------------|---|
| Knapdale Lochs SSSI | 8.34 km, north-west | Black-throated diver (breeding). |
| Knapdale Lochs SPA | 8.34 km, north-west | Black-throated diver (breeding). |
| Arran North Mountain SSSI | 9.06 km, south | Breeding bird assemblage (including, golden plover, dunlin, hen harrier, raven, peregrine falcon, golden eagle, red-throated diver and ptarmigan). |
| Kintyre Goose Roosts SPA | 14.49 km, south-west | Greenland white-fronted goose (non- breeding). |
| Kintyre Goose Roosts Ramsar | 14.49 km, south-west | Greenland white-fronted goose (non- breeding). |

Table 3.1: Designated sites for nature conservation.

SPA – Special Protection Area; SSSI – Site of Special Scientific Interest.

Non-statutory Designated Sites for Nature Conservation

- 3.1.5 The data request submitted to the ABReC identifies that the Site does not form part of any nonstatutory designated sites for nature conservation with ornithological interests.
- 3.1.6 In further review of non-statutory designated sites, the Site is also not located within 2 km of any such site with ornithological interests.

Existing Ornithological Records

<u>ABReC</u>

3.1.7 The data request submitted to the ABReC also sought existing ornithological records within the Site and a 2km buffer of the Site.

3.1.8 A record of peregrine falcon and oystercatcher were returned for the study area. Further record details are provided in **Annex 2**. Sensitive information concerning the peregrine falcon record is provided in **Appendix 9.2** and in **Confidential Figure 9.2.1**, with non-sensitive information presented in **Figure 9.2**.

<u>RSPB</u>

- 3.1.9 The data request submitted to the RSPB returned records of black grouse and white-tailed eagle for the study area.
- 3.1.10 Further record details are provided in **Annex 2**. Information pertaining to sensitive records of breeding black grouse and white-tailed eagle, which are considered confidential, is provided in **Appendix 9.2** and in **Confidential Figure 9.2.1**, with non-sensitive information presented in **Figure 9.2**.

ARSG

- 3.1.11 The data request submitted to the ARSG returned records of golden eagle and merlin for the study area. Further record details are provided in **Annex 2**.
- 3.1.12 Records of these protected breeding raptors are considered confidential and as such sensitive information are detailed within **Appendix 9.2** and in **Confidential Figure 9.2.1**.
- 3.1.13 No nest or roost records for any species were returned from within 2 km of the Site.

<u>FLS</u>

- 3.1.14 The data request submitted to the FLS returned records of hen harrier, osprey, short-eared owl, black grouse, red-throated diver and ptarmigan for the study area.
- 3.1.15 Further record details are provided in **Annex 2**. Information pertaining to sensitive records of breeding red-throated diver, black grouse and barn owl, which are considered confidential, is provided in **Appendix 9.2** and in **Confidential Figure 9.2.1**, with non-sensitive information presented in **Figure 9.2**.

Sheirdrim Renewable Energy Development

- 3.1.16 A summary of the main results from the ornithology surveys undertaken to support the Sheirdrim Renewable Energy Development EIA Report Chapter (SPR, 2019) are presented in **Table 3.2**.
- 3.1.17 The surveys which supported the Sheirdrim development were:
 - MBBS carried out April to June 2014, 2015 and 2016;
 - Scarce Breeding Bird Surveys carried out January to August 2014, February to August 2015, February to July 2016, April to August 2018, and April to August 2019;
 - Black Grouse Surveys carried out April and May 2014, 2015 and 2016;
 - VP Flight Activity Surveys carried out January 2014 to November 2016, and April to August 2019;
 - Goose Focal Watches carried out January to April 2014, October 2014 to March 2015, October 2015 to March 2016, November 2016 to April 2017, and October 2017 to April 2018; and
 - Winter Walkovers carried out January to March 2014, October 2014 to March 2015, September 2015 to March 2016, and January to March 2018.

| Species | Information |
|-----------------------------------|--|
| Whooper swan | 13 flights. |
| Greenland white- fronted goose | Preferred roost during winter survey period was Loch Tamalabh, with infrequent roosting on Loch chorra-riabhaich, Loch nan Gad, Lochan a' chreimh and Dubh Loch. |
| Greylag goose | 7 flights recorded. |
| Barnacle goose | 1 flight only recorded. |
| Black grouse | 2014 – 4 males lekking at 3 locations within 1.5 km of the Sheirdrim development. 2015 – 5 males lekking at 5 locations within 1.5 km of the Sheirdrim |
| | development. 2016 – 4 males lekking at 1 location within 1.5 km of the Sheirdrim development. |
| Red-throated diver | 2014 – 1 pair with breeding attempt within 2 km the Sheirdrim development. 2015 – 2 pairs with breeding attempt within 2 km of the Sheirdrim development. |
| | 2018 – 4 pairs with breeding attempt within 2 km of the Sheirdrim development. |
| | 2019 - 3 pairs with breeding attempt within 2 km of the Sheirdrim development. |
| | Note, no successful breeding attempts were however recorded. |
| Black-throated diver | 12 records - no evidence of breeding. |
| White-tailed eagle | 3 records – no evidence of breeding. |
| Hen harrier | Evidence of breeding in 2014, 2015, 2018 and 2019, with definitive evidence of successful nesting in 2014 and 2019 (within 2 km of the Sheirdrim development.). |
| Goshawk | 4 records – no evidence of breeding. |
| Golden eagle | Active breeding pair within 5 km of the Sheirdrim development, but flights recorded during survey not considered to be the breeding pair. |
| Osprey | 14 records – no evidence of breeding. |
| Golden plover | Modest numbers of flights – no evidence of breeding. |
| Lapwing | 2015 – nesting pair and another pair holding a territory. |
| Curlew | 2015 – pair holding territory. 2019 – pair nested successfully. |
| Other wading species | Woodcock, snipe and jack snipe were recorded infrequently during winter. |
| Barn owl | 1 nest site on periphery of the Sheirdrim development. |
| Short-eared owl | 15 records – no evidence of breeding. |
| Merlin | 2 records – no evidence of breeding. |
| Peregrine falcon | 8 records – no evidence of breeding. |

3.2 Field Surveys

VP Flight Activity Surveys

Target Species

- 3.2.1 Target Species flight activity recorded during the VP survey period from all VPs is summarised in **Table 3.3i** and **Table 3.3ii** for Year 1 and Year 2, respectively.
- 3.2.2 The total number of all flights, total number of birds recorded and the total flight time, from all VP locations combined is presented. This includes some flights which were detected outside of the VP study area and which are not at-risk of collision.
- 3.2.3 Detailed flight records are presented in **Annex 4**, which also indicates the total flight time for each species, including at-risk height. Flight lines for each species over the entire survey period are illustrated in **Figures 9.6a 9.6d**.

| Species | Total No. of Flights | Total No. of Birds | Total Flight Time (s) ⁵ |
|--------------------|----------------------|--------------------|------------------------------------|
| Whooper swan | 1 | 8 | 312 |
| Greylag goose | 3 | 29 | 10,993 |
| Teal | 2 | 4 | 124 |
| Black grouse | 1 | 1 | 8 |
| Red-throated diver | 50 | 70 | 13,407 |
| Hen harrier | 35 | 38 | 6,065 |
| Golden eagle | 46 | 54 | 8,310 |
| Osprey | 1 | 1 | 199 |
| Golden plover | 1 | 24 | 13,248 |
| Jack snipe | 1 | 1 | 42 |
| Snipe | 4 | 4 | 1,221 |
| Short-eared owl | 2 | 2 | 108 |
| Merlin | 1 | 1 | 71 |
| Peregrine falcon | 2 | 2 | 128 |

Table 3.3i: Target species flight activity summary – Year 1.

Table 3.3ii: Target species flight activity summary – Year 2.

| Species | Total No. of Flights | Total No. of Birds | Total Flight Time (s) ⁵ |
|--------------------|----------------------|--------------------|------------------------------------|
| Whooper swan | 1 | 1 | 204 |
| Greylag goose 2 | | 4 | 178 |
| Black grouse | 1 | 1 | 21 |
| Red-throated diver | 10 | 17 | 1,915 |
| Grey heron | 1 | 1 | 26 |

⁵ Total time multiplied by the number of birds.

Earraghail Renewable Energy Development Appendix 9.1: Ornithology

| Hen harrier 44 | | 48 | 4,714 |
|--------------------|----|----|--------|
| Golden eagle | 76 | 81 | 22,291 |
| White-tailed eagle | 1 | 1 | 204 |
| Honey buzzard | 2 | 2 | 403 |
| Merlin | 2 | 2 | 180 |

Secondary Species

- 3.2.4 Low levels of activity of the following secondary species were also recorded across the survey period:
 - Mallard;
 - Sparrowhawk;
 - Buzzard;
 - Great black-backed gull;
 - Common gull;
 - Herring gull;
 - Kestrel; and
 - Raven;

Moorland Breeding Bird Surveys

- 3.2.5 The MBBS undertaken in 2020 recorded a limited range of open moorland breeding species (teal, snipe and common gull), with much of the study area comprising closed canopy coniferous woodland.
- 3.2.6 Common crossbill listed on Schedule 1 of the Wildlife and Countryside Act 1981 (as amended) was also established as breeding within woodland habitats of the study area.
- 3.2.7 A summary of breeding territory numbers of target species recorded within the study area is summarised in **Table 3.4**, and approximate locations of these breeding territories are illustrated in **Figure 9.7**.

| Species | No. of Territories | | | |
|-------------|--------------------|--|--|--|
| | 2020 | | | |
| Teal | 1 | | | |
| Snipe | 1 | | | |
| Common gull | 1 | | | |

Table 3.4: Breeding territories recorded during the MBBS.

Annex 1 / Schedule 1 Breeding Raptor and Owl Searches

- 3.2.8 Four species of Annex 1/ Schedule 1 raptor and a single Annex 1 species of owl were recorded during breeding raptor and owl searches undertaken in 2020 and 2021, consisting of golden eagle, hen harrier, peregrine falcon, merlin and short-eared owl.
- 3.2.9 An adult merlin carrying prey was recorded during VP flight activity surveys in April 2020, but no further records of merlin, or evidence of merlin breeding, was recorded during the surveys.
- 3.2.10 One peregrine falcon flight was recorded in June 2020, with another flight of an immature peregrine in March 2021. No evidence of breeding was recorded in either breeding season.
- 3.2.11 A summary of breeding territory numbers for raptors and owls recorded within the study area is presented in **Table 3.5**, and given the sensitivity of the information further details are provided in **Appendix 9.2** and in **Confidential Figure 9.2.2**.

Table 3.5: Breeding territories recorded during the breeding raptor and owl searches.

| Species | No. of Te | erritories | | |
|-----------------|-----------|------------|--|--|
| | 2020 | 2021 | | |
| Short-eared owl | 1 | 0 | | |
| Hen harrier | 1 | 0 | | |
| Golden eagle | 0 | 1 | | |

Breeding Diver Searches

- 3.2.12 Breeding diver searches undertaken in 2020 recorded six pairs of red-throated divers within the study area, of which three pairs at least nested.
- 3.2.13 Breeding diver searches undertaken in 2021 recorded three pairs of red-throated divers within the study area, of which one pair at least nested.
- 3.2.14 No observations of black-throated divers were recorded during 2020 or 2021 surveys.
- 3.2.15 Given the sensitivity of the information, further details of breeding divers are provided in **Appendix** 9.2 and in **Confidential Figure 9.2.3**.

Breeding Diver Focal Breeding Loch Watches

- 3.2.16 Focal watches over occupied red-throated diver breeding lochans in 2020 recorded a total of 24 redthroated diver flights.
- 3.2.17 Focal watches over occupied red-throated diver breeding lochans in 2021 recorded a total of 12 redthroated diver flights.
- 3.2.18 Given the sensitivity of the information, further details of diver flight activity associated with breeding lochans are provided in **Appendix 9.2** and in **Confidential Figure 9.2.4**.

Breeding Black Grouse Surveys

3.2.19 Searches for black grouse leks in 2020 and 2021 recorded a total of 11 lek sites within the study area, each supporting between one and three males. The peak total number of males recorded within the study area during any one survey was eight males, and four females.

- 3.2.20 Not all lek sites were found to be in use over consecutive survey visits, with the study area considered to support a number of mobile lek sites supporting a small population of males.
- 3.2.21 Given the sensitivity of the information, further details are provided in Appendix 9.2 and in Confidential Figure 9.2.5.

Prey Transects

- 3.2.22 The main habitat type in transects 1 and 2 was heather moorland, and in transects 3 and 4 the dominant habitats were conifer plantation with some heather moorland.
- 3.2.23 Potential prey for golden eagles recorded during the spring 2021 (March) prey transects, consisted of deer, red grouse, voles, sheep and fox, with deer consistently the most abundant prey type in all transects.
- 3.2.24 In the summer 2021 (June) prey transects, voles were the most abundant prey type in transects 1 and 2 (heather moorland), with deer the most abundant prey type in transects 3 and 4 (plantation and heather moorland).
- 3.2.25 In the autumn 2021 (August) prey transects, deer was the most abundant prey type in transects 1, 2 and 4, with voles the most abundant prey type in transect 3.
- 3.2.26 **Table 3.6** summarises the results of the prey transects and the value is the relative abundance of each prey type (which is the number of 50 m sections were the specific prey was recorded divided by 20, which is the number of 50 m sections in the transect).

| Prey Type | | Marcl | n 2021 | | June 2021 | | | | August 2021 | | | |
|--------------|-----------------|-------|--------|-----------------|-----------|------|-----------------|------|-------------|------|------|------|
| | Transect Number | | | Transect Number | | | Transect Number | | | | | |
| | 1 | 2 | 3 | 4 | 1 | 2 | 3 | 4 | 1 | 2 | 3 | 4 |
| Deer | 1.00 | 1.00 | 0.95 | 0.90 | 0.30 | 0.50 | 0.70 | 0.45 | 0.40 | 0.45 | 0.40 | 0.65 |
| Red grouse | 0.35 | 0.20 | 0 | 0 | 0.50 | 0.55 | 0 | 0 | 0 | 0 | 0.20 | 0.15 |
| Voles | 0.55 | 0.60 | 0.45 | 0.65 | 0.85 | 0.95 | 0.50 | 0.40 | 0.25 | 0.25 | 0.45 | 0.30 |
| Sheep | 0.20 | 0.60 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Fox | 0.05 | 0 | 0.15 | 0.20 | 0.10 | 0.25 | 0.10 | 0.10 | 0 | 0 | 0.05 | 0 |

ANNEX 1 – BIRD SPECIES SUMMARY

Table A1.1 provides a list of bird species referred to within **Chapter 9** and associated appendices of Earraghail Renewable Energy Development EIA Report. Both common and species names are presented along with a summary of each species relevant conservation status using the following abbreviations:

- Annex 1 species listed on Annex 1 of the Birds Directive;
- Schedule 1, 1A, A1 species listed on Schedule 1, Schedule 1A or Schedule A1 of the Wildlife and Countryside Act 1981 (as amended);
- BoCC BoCCs as listed by leading bird conservation organisations in the UK, including the RSPB and BTO. Red and Amber categories are given (Stanbury *et al.*, 2021);
- SBL species listed on the Scottish Biodiversity List; and
- LBAP bird species selected for action in the Argyll and Bute Local Biodiversity Action Plan (2015-2020)⁶.

| Common Name | Species Name | Conservation Status |
|-------------------------------|----------------------|--|
| Whooper swan | Cygnus cygnus | Annex 1, BoCC – Amber, SBL |
| Greenland white-fronted goose | Anser albifrons | Annex 1, BoCC – Red, LBAP |
| Greylag goose | Anser anser | S1 ⁷ , BoCC – Amber |
| Barnacle goose | Branta leucopsis | Annex 1, BoCC – Amber, SBL, LBAP |
| Teal | Anas crecca | BoCC – Amber |
| Mallard | Anas platyrhynchos | BoCC – Amber |
| Red grouse | Lagopus lagopus | SBL, LBAP |
| Ptarmigan | Lagopus muta | BoCC – Red |
| Black grouse | Tetrao tetrix | Annex 1, BoCC – Red, SBL, LBAP |
| Red-throated diver | Gavia stellata | Annex 1, S1, SBL, LBAP |
| Black-throated diver | Gavia arctica | Annex 1, S1, BoCC – Amber, SBL, LBAP |
| Grey heron | Ardea cinerea | - |
| White-tailed eagle | Haliaeetus albicilla | Annex 1, S1, S1A, SA1, BoCC – Amber, SBL, LBAP |
| Hen harrier | Circus cyaneus | Annex 1, S1, S1A, BoCC – Red, SBL, LBAP |
| Goshawk | Accipiter gentilis | Annex 1, S1 |
| Sparrowhawk | Accipiter nisus | BoCC – Amber |
| Buzzard | Buteo buteo | - |
| Honey buzzard | Pernis apivorus | Annex 1, S1, BoCC – Amber, SBL |
| Golden eagle | Aquila chrysaetos | Annex 1, S1, S1A, SA1, SBL, LBAP |

Table A1.1: Summary of bird species.

| Common Name | Species Name | Conservation Status |
|-------------------------|-----------------------|--------------------------------------|
| Osprey | Pandion haliaetus | Annex 1, S1, BoCC – Amber, SBL, LBAP |
| Oystercatcher | Haematopus ostralegus | BoCC – Amber |
| Golden plover | Pluvialis apricaria | Annex 1, SBL, LBAP |
| Lapwing | Vanellus vanellus | BoCC – Red, SBL, LBAP |
| Curlew | Numenius arquata | BoCC – Red, SBL, LBAP |
| Dunlin | Calidris alpina | BoCC – Red, SBL, LBAP |
| Jack snipe | Lymnocryptes minimus | - |
| Woodcock | Scolopax rusticola | BoCC – Red, SBL |
| Snipe | Gallinago gallinago | BoCC – Amber |
| Great black-backed gull | Larus marinus | BoCC – Amber |
| Common gull | Larus canus | BoCC – Amber |
| Herring gull | Larus argentatus | BoCC – Red, SBL, LBAP |
| Barn owl | Tyto alba | S1, SBL |
| Short-eared owl | Asio flammeus | Annex 1, BoCC – Amber, SBL, LBAP |
| Kestrel | Falco tinnunculus | BoCC – Amber, SBL |
| Merlin | Falco columbarius | Annex 1, S1, BoCC – Amber, SBL, LBAP |
| Peregrine falcon | Falco peregrinus | Annex 1, S1, SBL, LBAP |
| Raven | Corvus corax | - |
| Common crossbill | Loxia curvirostra | S1, SBL |

ANNEX 2 – EXISTING ORNITHOLOGICAL RECORDS

Table A2.1 provides a summary of existing ornithological records returned by ABReC within 2 km radius of the Site. Only records from within the last 10 years are considered (since 2010). Only species regarded as target species are included within **Table A2.1**.

Information regarding nest sites for sensitive species (Schedule 1 species and black grouse leks) considered in this Annex 2, is summarised in Confidential **Appendix 9.2** and **Confidential Figure 9.2.1**.

| Species | No. of Records | Date Range | Summary |
|------------------|-------------------|------------|---------------------------|
| Oystercatcher | 1 | 2017 | Recorded at NR 9812 6512. |
| Peregrine falcon | 1 | 2017 | Assumed nest site. |

Table A2.1: Summary of existing ornithological records (ABReC).

Table A2.2 provides a summary of existing ornithological records returned by RSPB within 2 km radius of the Site (extended to 6 km for eagles). Only records from within the last 10 years are considered (since 2010). Only species regarded as target species are included within **Table A2-2**.

| Only species regulated as target sp | | | | | | | | | | | |
|--|-------------------|-------------|---|--|--|--|--|--|--|--|--|
| Table A2.2: Summary of existing ornithological records (RSPB). | | | | | | | | | | | |
| Species | No. of Records | Date Range | Summary | | | | | | | | |
| Black grouse | 18 | 2010 - 2018 | Records from five lek locations. | | | | | | | | |
| White-tailed eagle | 1 | 2010 | Non-breeding bird (satellite tag fix) at NR9272. | | | | | | | | |

Table A2.3 provides a summary of existing ornithological records returned by ARSG within 2 km radius of the Site (extended to 6 km for eagles). Only records from within the last 10 years are considered (since 2010). Only species regarded as target species are included within **Table A2-3**.

| Table A2.3: Summary of existing of | ornithological records (ARSG). |
|------------------------------------|--------------------------------|
| | |

| Species | No. of Records | Date Range | Summary |
|--------------|-------------------|-------------|---|
| Golden eagle | 6 | 2014 - 2019 | Principal, former and alternative nest sites. |
| Merlin | 6 | 1981 - 2010 | Former nest sites. |

Table A2.4 provides a summary of existing ornithological records returned by FLS within Skipness and Corranbuie forest areas. Only records from within the last 10 years are considered (since 2010). Only species regarded as target species are included within **Table A2-4**.

Table A2.4: Summary of existing ornithological records (FLS).

| Species | No. of Records | Date Range | Summary |
|--------------|-------------------|-------------|----------------------------|
| Black grouse | 6 | 2014 - 2015 | Including three lek sites. |

| Species | No. of Records | Date Range | Summary | | | | |
|--------------------|-------------------|--------------|-------------------------------------|--|--|--|--|
| Red-throated diver | 2 | 2012 | Includes a mating pair. | | | | |
| Barn owl | 1 | Not provided | Nest barrel. | | | | |
| Golden eagle | 2 | 2012 | Includes a nest site. | | | | |
| Osprey | 1 | 2012 | An adult in flight at NR 8540 6587. | | | | |

ANNEX 3 – ORNITHOLOGY FIELD SURVEY EFFORT

The following codes are used to record weather conditions within Tables A3-1 to A3-7:

| Wind Speed | | Rain | | Cloud Cover | |
|------------------|----|---------------|---|-------------|---|
| Calm | 0 | None | 0 | Out of 8 | |
| Light air | 1 | Drizzle/mist | 1 | | |
| Light breeze | 2 | Light showers | 2 | Frost | |
| Gentle breeze | 3 | Heavy showers | 3 | None | 0 |
| Moderate breeze | 4 | Heavy rain | 4 | Ground | 1 |
| Fresh breeze | 5 | | | All day | 2 |
| Strong breeze | 6 | Visibility | | | |
| Moderate gale | 7 | Poor | 0 | Snow | |
| Fresh gale | 8 | <1km | 1 | None | 0 |
| Strong gale | 9 | >1km | 2 | On site | 1 |
| Whole gale | 10 | | | High ground | 2 |
| Storm | 11 | Cloud Height | | | |
| | | <150m | 0 | | |
| Wind Direction | | 150-500m | 1 | | |
| 16 point compass | | >500m | 2 | | |

Field surveys were undertaken by the following named surveyors:

Gavia Environmental Ltd. (September 2019 to March 2020):

A. Taylor (AT), K. Mackinnon (KM), E. Dillon (ED), D. Morrison (DM) and C. Laing (CL). Note, no names were provided for the abbreviated surveyor 'WS', 'Jch' and 'DB'.

Avian Ecology Ltd. (April 2020 to November2021):

A. Russel (AR), C. Griffin (CG), G. Palmer (GP), M. Wood (MW), G. Haskins (GH), R. Thewlis (RT), G. Dunbar (GD), A. MacNab (AJM) and S. MacDonald (SM).

ANNEX 4: VP FLIGHT ACTIVITY SURVEY – TARGET SPECIES FLIGHT RECORDS

The follow British Trust for Ornithology (BTO) species codes are used to denote target species within **Table A4.1** and/or **Table A4.2**:

BK: Black grouse; **EA**: Golden eagle; **WE**: White-tailed eagle; **HH**: Hen harrier; **RH**: Red-throated diver; **ML**: Merlin; **T.**: Teal; **SN**: Snipe; **PE**: Peregrine; **OP**: Osprey; **SE**: Short-eared owl; **HZ**: Honey buzzard; **GJ**: Greylag goose; **WS**: Whooper swan; **JS**: Jack snipe; **GP**: Golden plover; **H.**: Grey heron.

For the purposes of this Report, the duration of at-risk height flight activity is based on the following candidate turbine specification:

- Maximum tip height: 180 m.
- Maximum rotor diameter: 155 m.

Table A4.1: Target species flight records – Year 1 (September 2019 to November 2020).

| Date | VP | Species | | Start Time | Total Flight Duration (s) | Duration At-Risk Height (s) | Notes |
|------------|----|---------|---|------------|---------------------------|-----------------------------|---|
| 17/09/2019 | 3a | EA | 1 | 12:45 | 345 | 345 | Too distant to sex or age. |
| 15/10/2019 | 3a | EA | 1 | 12:50 | 30 | 30 | - |
| 15/10/2019 | 3a | EA | 2 | 14:05 | 90 | 90 | - |
| 15/10/2019 | 3a | EA | 1 | 14:15 | 155 | 155 | - |
| 05/11/2019 | 2 | НН | 1 | 12:40 | 40 | 40 | Male - adult - chased off by meadow pipits. |
| 09/11/2019 | 1 | EA | 1 | 13:05 | 120 | 120 | Juvenile. |
| 09/11/2019 | 1 | EA | 1 | 13:40 | 75 | 75 | Juvenile. |
| 20/01/2020 | 4 | HH | 1 | 14:03 | 30 | 0 | Male. |
| 20/01/2020 | 1 | НН | 1 | 15:58 | 51 | 0 | Male. |
