Zone of Theoretical Visibility (ZTV)
run to blade tip height of 200m

1-3 turbines visible

4-7 turbines visible

8-10 turbines visible

11-14 turbines visible

NB The Zone of Theoretical Visibility (ZTV) image illustrates the theoretical extent of where turbines will be visible from assuming 100% visibility. It is generated using terrain data only and does not take into account any screening that vegetation or the built environment may provide. It is as such a worst case ZTV and the actual extents of visibility are likely to be much less extensive.
